Newark, NJ | +1 (862) 372-3400 | varnikaduvvur1133@gmail.com | linkedin.com/in/varnika-duvvur

PROFESSIONAL SUMMARY

Bachelor of Architecture graduate from NJIT (May 2026) seeking a full-time position in architecture or construction. Strong technical skills in Revit, AutoCAD, Rhino, and Grasshopper, with experience across the full design pipeline from computational modeling to production-ready construction documentation. Hands-on exposure to structural and MEP systems through on-site construction experience in Dubai. Detail-oriented, collaborative, and eager to contribute to real-world architectural and construction projects from day one.

SKILLS & CERTIFICATIONS

BIM & CAD: Autodesk Revit, AutoCAD (floor plans, sections, elevations, wall details, construction drawings)

Design & Viz: Rhino, Grasshopper, SketchUp, Lumion, V-Ray, Stable Diffusion, QGIS, MS Office Suite

Certifications: Harvard Architecture · Canter CADD AutoCAD · Autodesk Revit · Rhino/Grasshopper · Lumion. LEED GA (IP)

Strengths: Detail-oriented documentation · Cross-disciplinary communication · Adaptability · Site exposure

EDUCATION

Bachelor of Architecture — New Jersey Institute of Technology (NJIT), Newark, NJ, May 2026

Relevant Coursework: Structural Systems · Building Technology · Construction Documentation · Mechanical & Environmental Systems · BIM Integration · Urban Design · Adaptive Reuse

High School Diploma — GEMS Modern Academy, Dubai, UAE, June 2021

PROFESSIONAL EXPERIENCE

Architectural Intern — Specialty Structures USA, Dubai, UAE June – Aug 2021

- Collaborated with engineers, architects, and construction supervisors on active structural and specialty projects across Dubai and Abu Dhabi, developing a strong understanding of how design drawings translate to field execution.
- Attended on-site visits to landmark projects including Last Exit, Green Planet, and Jumeirah Creek Hotel — observing structural assembly, MEP coordination, and construction sequencing in complex built environments.
- Produced design and documentation work using AutoCAD and Revit, contributing to office-based project coordination and multi-disciplinary workflows on active construction teams.

Architectural Intern — Peter Coffin Studio Sep – Dec 2025

- Applied a circle-packing algorithm in Grasshopper to generate a graded lattice structure responsive to curvature and scale, producing a constructable, lightweight pavilion design.
- Resolved constructability challenges by translating parametric geometry into buildable, fabrication-ready components, balancing structural integrity, permeability, and human scale.
- Collaborated with the design team to communicate computational outputs in terms of structural feasibility and material efficiency across disciplines.

Architectural Researcher & Archivist — Paul Rudolph Institute of Modern Architecture, Newark, NJ, June 2025 – Present

- Digitally preserved architectural history by scanning, cataloguing, and archiving original blueprints, construction drawings, and photographs into the institute's permanent digital collection.
- Maintained strict document control, accurate labeling, and long-term accessibility standards — skills directly applicable to BIM file management and CAD drawing coordination.
- Applied document control and organizational practices to ensure accurate cataloguing and long-term accessibility of construction records for

SELECTED ACADEMIC PROJECTS

- Terra Hotel, Manhattan (ARCH 396) — High-rise with terrace farming; 7 floor plans, full sections, elevations, curtain wall assembly details, truss framing, and green roof connection drawings.
- Liberty Rail Gardens, Liberty State Park (ARCH 495) — Ecological civic pavilion with daylighting simulation (UDIa, sDA, ASE), floor plans, axonometrics, and environmental performance analysis.
- Branch Brook Park Modern Art Gallery (ARCH 296) — Full CD set: floor plans, RCPs, building sections, wall sections, structural grid, circulation diagrams, and exterior elevations.
- Flexible Spaces in São Paulo Museum of Art (ARCH 361) — Adaptive reuse with modular foldable wall systems, exploded axonometric facade diagrams, softwall accordion systems, and full building sections.
